

STATEMENT ABOUT THE FUTURE

THE KINGDOM OF ZATSUNEI

Office of the King

17th March, 2026

To the people of Zatsunei,

The Roblox platform is falling apart. Since the age groups update, they have destroyed a lot of all the social aspects that Roblox once offered. Today, they released an update that allows us to add more group roles to one user and they removed the fee, but we cannot rely on Roblox for the future of Zatsunei.

Minecraft is my second option, but hosting a server costs money and requires careful planning. Such a server would need to be long-term, and the economy and world would need to align with our views. Few games offer a space where we can freely express the nature of our community, which, as stated in the Constitution, is a nation with a high standard for social concord.

I don't want to give up on Zatsunei because of this. However, we need to find alternatives or centralize our nation on something secure for the future, because Roblox only serves its investors. Finding a place to stay is really difficult because we also need to rework many systems, such as role management, to avoid becoming too dependent on Roblox or another game.

I have the idea that we should become a bit more decentralized in the practical sense, meaning we should not have a strictly fixed place to stay. Of course, Discord will serve as our central communication and management hub. However, since our community is small, we should try to meet up in smaller groups on various Minecraft servers that we like. We could also host small worlds open for multiplayer using mods such as E4MC or Essential.

His Royal Sovereignty, King Dezevlo of Zatsunei,

Office of the King of Zatsunei

We need to plan our actions and not violate the rights or rules of others. By definition, a nation is a large social group with shared interests that constitutes a political entity. If you are willing, you should perform good works in the name of the Kingdom of Zatsunei, since we want to help and establish a community of concord and social harmony.

In conclusion, my goal is to make the Kingdom more dependent on Minecraft, with our own server and rules, if possible. My lawmaking has also slowed recently due to these issues, but I won't shut down the community because of inactivity or incompetent rich people. I hope we can find better alternatives and establish systems to manage all of this, which will benefit our long-term journey.

Signed,

A stylized, cursive handwritten signature that reads "Dezevlo". The letters are fluid and connected, with a prominent 'D' and 'Z'.
